

Triton II Phono Preamplifier

The all new Triton II is simply a terrific sounding phono preamp and is a bargain at its price. With its large variety of loading options, the Triton's flexibility and high performance make it suitable for virtually any phono cartridge and system. The completely new circuit design offers improved sound, better dynamics, a significantly lower noise floor and higher overall gain (70dB). Because of its ultra low noise floor the Triton II excels with the most difficult cartridges. We have also added a user selectable rumble filter and an external mono switch to the new design.

General Features:

- All Moving coil (MC) or Moving magnet (MM) operation
- Three stages of amplification for ultra low noise
- Precise RIAA equalization +/- 0.1 dB 20-20KHz
- Fully regulated multistage power supply
- Rumble filter (user selectable on/off)
- 20, 30, 100, 300, 1K, 47k, 75K, 100K Ohm loading options
- 0, 47, 150, 470, 1K Picofared loading options
- Mono switch
- Hatch cover for easy loading access
- Four gain settings: 43dB, 55dB, 60dB, 70dB
- Ultra heavy-duty gold RCA inputs
- Precision components throughout
- Heavy machined aluminum faceplate
- Two heavy (2 ounce) copper circuit boards
- Detachable IEC power cord
- 17" W x 9" D x 3.5" H
- Shipping weight 18 lb
- Entirely designed and hand built in the USA
- 3 year limited warranty
